

Widgify

Modular Desktop Widget Suite for Windows & macOS

Project Name:	Widgify
Short Description:	Customizable PC Desktop Widget Dashboard & App Launcher
Technology Used:	Advanced Java (Servlets, JSP, JDBC & MySQL Database)
Target Systems:	Windows 10 / 11 & macOS

1. What is Widgify?

Widgify is a simple, modern desktop application that lets PC users turn their computer screen into an interactive widget dashboard. Instead of opening multiple browser tabs or apps, users can place useful, live-updating widgets directly on their desktop screen.

2. Main Features & Widget Types

■ Clocks & Timers Digital clocks, world timezones, countdown timers, and study timers.	■ PC Health Monitor Live CPU usage %, RAM memory consumption, and battery levels.
■ Quick App Launcher Launch favorite desktop apps (VS Code, Chrome, Terminal) with 1 click.	■ Live Web API Widgets Show live crypto prices, weather updates, or GitHub activity.
■ Sticky Notes & Tasks Quick desktop note board and task checklist for daily work.	■ Drag & Drop Layout Easily move, resize, and lock widgets anywhere on a custom grid.

3. Why is Widgify Useful & Unique?

- **Easy for Everyone:** No programming required—users simply drag and drop widgets visually.
- **Cross-Platform:** Works seamlessly on both Windows and macOS.
- **Saves Time:** Keeps all essential shortcuts, system stats, and live info in one place.

4. Simple Technology Overview

Built using core Advanced Java concepts required for BSc IT evaluation: **Java Servlets** (handling user actions), **JSP** (web page rendering), **JDBC** (database connectivity), and **MySQL** (saving widget layouts and user settings).
